THE BUNGER DIFFERENCE

STEEL BUILDINGS BETTER BY DESIGN.

CUSTOMIZATION.

Every Bunger Steel building is made to order. We design to your specifications in accordance with your city and county requirements.

EXPREIENCE.

Choosing us means working with a trusted company with decades of experience. 45+ years to be exact. From start to finish, your project is handled by experts.

LOCAL.

We craft every building with passion. Our team listens to your needs and wants to make your dream a reality. Stop by to meet our team!

SINGLE SOURCE.

We are the manufacturer and fabricator for our products. We design, engineer, fabricate, deliver and install your building in house.

BACKED BY US.

Our structures are built to perform year after year. Every building has a 20 year warranty and 35 year paint warranty.

FLEXIBILITY.

We fabricate pre-engineered metal buildings to your custom specifications. Our buildings often include detail that others in the industry add on after fabrication.

COR-TEN®

What is COR-TEN®?

COR-TEN® is the United States Steel Corporation (USS) trade name for an atmospheric corrosion resistant steel. COR-TEN® is a trademarked name owned by U.S. Steel. It refers to a group of steel alloys also known as weathering steel developed in the 1930's by US Steel. It was originally developed for the expanding use of railroad coal wagons.

COR-TEN® is not available. What is available is steel in an A606-4 in metal roofing/siding panels, standing seam panels, flat sheets, and coil form. Designed to have the texture and appearance but without the weakening of rusted steel; COR-TEN® products are commonly favored by end users, architects and general contractors.

How does it work?

The science behind weathering steel is a process by which this specifically designed steel oxidizes as it is exposed to weather like any other type of steel. However, instead of rusting completely through, the top rusted layer creates a barrier and locks in the oxidation to prevent further deterioration of the metal. In a sense, this patina protects the structural integrity of the steel. You can rest assured it is strong and durable while providing a weathered effect to your structure.

What are common uses for COR-TEN®?

We offer COR-TEN® as A606-4 in a number of wall panel types as well as custom trim and flat sheets. A606-4 steel is available in metal roofing/siding panels, standing seam panels, flat sheets, and coil form. Architects often incorporate it into their designs, artists use it for sculptures and contractors use it in landscaping elements as well as roofing and as substitutes for regular steel.

Unlike most steel builders, Bungler Steel is the fabricator, not a broker so you can rest assured the product and service you receive is of superior quality. We continuously develop procedures and policies to ensure a supported and efficient staff. From the solid structural engineering of our buildings to the honesty and reliability of everyone in our organization, integrity is the foundation of every structure and component we build. Our product is produced in a practiced and professional manner from the initial estimate to the final delivery. At Bungler Steel, we hope to inspire innovation in our customers, employees and community. Thank you for your business.
