

METAL BUILDINGS AND COMPONENTS

THE BENEFITS OF METAL ROOFING

CUSTOMIZATION

With 15+ color options and many different panel types, lengths and gauges, your choices are endless!

DURABILITY

Steel roofs can withstand higher wind speeds, are favored in snowy climates for their shedding abilities and can even protect from wildfires.

LONGEVITY

The lifespan of a metal roof is between 50-100 years depending on the type used.

ENERGY EFFICIENT

A metal roof reflects solar heat back into the atmosphere versus absorbing the energy.

OUR STORY

SINCE 1974

Bunger Steel has been family owned and operated from the start. Today, we are Arizona's largest steel building and components vendor, and have over 40,000 projects constructed in the Southwestern United States.

LOCALLY CRAFTED

Bunger Steel remains committed to the in-house fabrication of our components and buildings. We fabricate pre-engineered metal buildings to your custom specifications not as a one-size-fits-all. Because of this, our buildings often include details that others in the industry add on after the fact.

BETTER BY DESIGN

Unlike most steel builders, Bunger is the actual fabricator, not a broker, so you can be assured the product you receive is of superior quality. From the solid structural engineering of our buildings to the honesty and reliability of everyone in our organization, integrity is the foundation of every quality, pre-engineered structure we build.

STRUCTURAL INTEGRITY

Bunger Steel buildings are constructed to last a lifetime. Made from the highest-grade steel, fabricated in our own factory, our structures are built to perform year after year. Choosing Bunger Steel means working with a single-source provider that can design, engineer, fabricate, deliver, and install your building in-house.

COR-TEN®

What is COR-TEN®?

COR-TEN® is the United States Steel Corporation (USS) trade name for an atmospheric corrosion resistant steel. COR-TEN® is a trademarked name owned by U.S. Steel. It refers to a group of steel alloys also known as weathering steel developed in the 1930's by US Steel. It was originally developed for the expanding use of railroad coal wagons.

COR-TEN® is not available. What is available is steel in an A606-4 in metal roofing/siding panels, standing seam panels, flat sheets, and coil form. Designed to have the texture and appearance but without the weakening of rusted steel; COR-TEN® products are commonly favored by end users, architects and general contractors.

How does it work?

The science behind weathering steel is a process by which this specifically designed steel oxidizes as it is exposed to weather like any other type of steel. However, instead of rusting completely through, the top rusted layer creates a barrier and locks in the oxidation to prevent further deterioration of the metal. In a sense, this patina protects the structural integrity of the steel. You can rest assured it is strong and durable while providing a weathered effect to your structure.

What are common uses for COR-TEN®?

We offer COR-TEN® as A606-4 in a number of wall panel types as well as custom trim and flat sheets. A606-4 steel is available in metal roofing/siding panels, standing seam panels, flat sheets, and coil form. Architects often incorporate it into their designs, artists use it for sculptures and contractors use it in landscaping elements as well as roofing and as substitutes for regular steel.
